Reauthorizing the Secure Rural Schools and Community Self-Determination Act of 2000

Katie Hoover
Analyst in Natural Resources Policy

February 26, 2013
Summary

Many counties are compensated for the tax-exempt status of federal lands. Counties with national forest lands and with certain Bureau of Land Management lands have historically received a percentage of agency revenues, primarily from timber sales. However, timber sales have declined substantially—by more than 90% in some areas. Thus, Congress enacted the Secure Rural Schools and Community Self-Determination Act of 2000 (SRS; P.L. 106-393) as a temporary, optional program of payments based on historic, rather than current, revenues.

Authorization for SRS payments originally expired at the end of FY2006, but through several reauthorizations the program was extended through FY2012. Congressional debates over reauthorization considered the basis and level of compensation (historical, tax equivalency, etc.); the source of funds (receipts, a new tax or revenue source, etc.); the authorized and required uses of the payments; interaction with other compensation programs (notably Payments in Lieu of Taxes); and the duration of any changes (temporary or permanent). In addition, legislation with mandatory spending, such as SRS reauthorization, raises policy questions about increasing the deficit; current budget rules to restrain deficit spending typically impose a procedural barrier to such legislation, generally requiring offsets by additional receipts or reductions in other mandatory spending.

In 2008, the Emergency Economic Stabilization Act (P.L. 110-343) enacted a four-year extension to SRS authorization through FY2011, with declining payments, a modified formula, and transition payments for certain areas. In 2012, Congress enacted a one-year extension through FY2012, and amended the program by slowing the decline in payment levels and tightening requirements that counties select a payment option promptly (P.L. 112-141).

With the expiration of SRS at the end of FY2012, county compensation is again the subject of congressional debates. County payments are set to return to a revenue-based system for FY2013, and are likely to be significantly lower than the previous years’ payments. Congress may consider extending SRS, with or without modifications, implementing other legislative proposals to address the county payments, or taking no action (thus continuing the revenue-based system that took effect upon the program’s expiration). To date, no legislative action has occurred in the 113th Congress. Discussion in the 113th Congress may focus on many of the same issues that were debated in 2006-2008 and again in 2012.

Many counties are compensated for the tax-exempt status of federal lands within those counties. Counties with national forest lands and with certain Bureau of Land Management (BLM) lands have historically received a percentage of agency revenues, primarily from timber sales. However, timber sales have declined substantially since the historic high cut values in 1989—by more than 90% in some areas. Congress enacted the Secure Rural Schools and Community Self-Determination Act of 2000 (SRS, P.L. 106-393) to provide a temporary, optional system to supplant the revenue-sharing programs for the national forests, managed by the Forest Service (FS) in the Department of Agriculture, and for certain public lands administered by the BLM in the Department of the Interior. The law authorizing these payments expired at the end of FY2006. The 109th Congress considered the program, but did not enact reauthorizing legislation. The 110th Congress extended the payments for one year, then enacted legislation to reauthorize the program for four years and to modify the formula for allocating the payments. The authorization for payments was set to expire again after payments were made for FY2011, but the 112th Congress extended the program for one more year through FY2012 and amended the program by slowing the decline in payments. The authorization expired after payments were made for FY2012. Currently, payments for FY2013 will revert to a percentage of agency revenues, primarily from timber sales and recreation fees. This report explains the changes enacted for the program by the amendments in 2008 and 2012, and then describes the issues that Congress has debated and that the 113th Congress may again debate.

Background

In 1908, the FS began paying 25% of its gross receipts to the states for use on roads and schools in the counties where the national forests are located; receipts come from sales, leases, rentals, or other fees for using national forest lands or resources (e.g., timber sales, recreation fees, and communication site leases). This mandatory spending program was enacted to compensate local governments for the tax-exempt status of the national forests, but the compensation rate (10% of gross receipts in 1906 and 1907; 25% of gross receipts since) was not discussed in the 1906-1908 debates. This receipt-sharing program is called FS Payments to States, because each state allocates the funds to road and school programs, although the FS determines the amount to be spent in each county based on the acreage of each national forest in each county. The states cannot retain any of the funds; they must be passed through to local governmental entities for use at the county level (but not necessarily to county governments) for authorized road and school programs. State law sets forth how the payments are to be allocated between road and school projects.

Congress has also enacted numerous programs to share receipts from BLM lands for various types of resource use and from various classes of land, but one program—the Oregon and California (O&C) payments—accounts for the vast majority (more than 95%) of BLM receipt-sharing. The O&C payments are made to the counties in western Oregon containing the revested Oregon and California grant lands returned to federal ownership for failure to fulfill the terms of the grant. The O&C counties receive 50% of the receipts from these lands. These mandatory payments go directly to the counties for any local governmental purposes. Concerns about, and

proposals to alter, FS receipt-sharing payments also typically include the O&C payments, because both are substantial payments derived largely from timber receipts.

At their pre-SRS peaks in FY1989, FS payments totaled $362 million, while O&C payments totaled $110 million. FS and O&C receipts have declined substantially since FY1989, largely because of declines in timber sales (see Figure 1). The decline began in the Pacific Northwest, owing in part to efforts to protect northern spotted owl habitat and other values. Provisions in the Omnibus Budget Reconciliation Act of 1993 directed FS payments for 17 national forests in Washington, Oregon, and California and BLM payments to the O&C counties at a declining percentage (beginning at 85% in FY1994 and declining by 3 percentage points annually) of the average payments for FY1986-FY1990. Declining federal timber sales in other areas led to the nationwide SRS program replacing these safety net or “owl” payments in 2000.

![Figure 1. Forest Service Cut Volume and Cut Value (2012 dollars)](image)

Payments under SRS are substantial, and significantly greater than the receipt-sharing payments would be. For example, the average annual total SRS payment for FY2001 through FY2011 was $383 million. In contrast, under the receipt-sharing system prior to the enactment of SRS, the average annual total payment was $273 million from FY1990 through FY2000. Figure 2 shows a

---

3 The decline in timber harvests is attributable to a variety of factors, including a combination of forest management policies and practice, increased planning and procedural requirements, changing public preferences, economic, and industry factors.

4 P.L. 103-66 §13982-3.
comparison of the FS actual payments to estimates of what the payments would have been had SRS not been enacted. FS receipts (for receipt-sharing purposes) in FY2011 totaled $323 million. If receipt-sharing had been used rather than SRS payments then the 25% payments would have been less than $80 million. However, FY2011 payments under SRS actually totaled $308 million. Similarly, BLM timber receipts from western Oregon (which includes some non-O&C lands) totaled $22 million in FY2011. If 50% payments had been used, then $11 million would have been transferred to the counties, compared to SRS payments of $40 million in FY2011. If SRS is not reauthorized, FY2013 payments will again be based on a percentage of agency receipts, estimated to be $85 million for the Forest Service portion of the payment.7

Figure 2. FS Total Payments and Estimated Payments

Notes: The data presented includes payments under the 25% Payments to States and SRS Title I and Title III programs, but does not include SRS Title II payments and miscellaneous county payments authorized through various other FS payment programs not discussed in this report, such as payments from land utilization projects.

In addition to these receipt-sharing programs, Congress enacted the Payments in Lieu of Taxes (PILT) Program. PILT payments to counties are based on “eligible” federal lands, including national forests and O&C lands, in each county (but are restricted in counties with very low populations). PILT payments are reduced (to a minimum payment per acre) by other payment

---

5 Data provided by the Forest Service Legislative Affairs office, February 21, 2013.
programs—including FS Payments to States and BLM’s O&C payments—so changes to these latter programs may also affect a county’s payments under PILT. This also explains why FY2012 PILT payments to Colorado were double the PILT payments to Oregon, even though there is more federal land in Oregon (32.6 million acres) than in Colorado (23.8 million acres).

As enacted, PILT requires annual appropriations. If the appropriations are less than the authorized total payments, each county gets its calculated pro rata share of the appropriations. However, the 2008 and 2012 SRS amendments also made PILT payments mandatory spending for FY2008-FY2012. Thus, for those fiscal years, each county received 100% of its authorized PILT payment.

One issue of concern to Congress is the geographic allocation of the FS, O&C, and PILT payments. Table 1 shows the payments for FY2012. The largest FS and O&C payments are in Oregon, which received nearly 35% of the total payments. The next-largest payments are in California, which received just over 10% of the total payments. PILT payments are more evenly distributed, with no state receiving more than 10% of the total payments.

Receipt-Sharing Program Concerns and Responses

Concerns

The counties and other observers have raised three concerns about FS and O&C receipt-sharing payments. The primary focus has been on the decline in FS and O&C receipts due to the decline in timber sales, particularly in Oregon. National forest receipts (subject to sharing) declined from their peak of $1.53 billion in FY1989 to $266 million in FY2003—a drop of 83% from the FY1989 level. Estimated receipts for FY2012 were $340 million. In some areas, the decline was even greater; for example, payments to the eastern Oregon counties containing the Ochoco National Forest fell from $10 million in FY1991 to $309,000 in FY1998—a decline of 97% in seven years.

Another concern has been annual fluctuations in the payments. Even in areas with modest declines or increases, the payments varied widely from year to year. From FY1985 to FY2000, the payments from each national forest had fluctuations of an average of nearly 30% annually—that is, on average, a county’s payment in any year was likely to be nearly 30% higher or lower than its payment the preceding year. Such wide annual fluctuations imposed serious budgeting difficulties on the counties.

A third, longer-term concern is referred to as linkage. Some observers have noted that, because the counties receive a portion of receipts, they are rewarded for advocating receipt-generating activities (principally timber sales) and for opposing management that might reduce or constrain such activities (e.g., designating wilderness areas or protecting commercial, tribal, or sport fish harvests). County governments have thus often been allied with the timber industry, and opposed to environmental and other interest groups, in debates over FS management and budget decisions. This source of funds was deemed appropriate when the FS program was created (albeit, prior to creation of federal income taxes). Some interests support retaining the linkage between county

---

a. “Other” includes the District of Columbia, Guam, Puerto Rico, and the Virgin Islands
compensation and agency receipts; local support for receipt-generating activities is seen as appropriate by these constituencies, because such activities usually also provide local employment and income, especially in rural areas where unemployment is often high. Others assert that ending the linkage is important so that local government officials can be independent in supporting whatever management decisions benefit their locality, rather than having financial incentives to support particular decisions.

**Historical Proposals to Change the Receipt-Sharing System**

Concerns about the FS and BLM programs have led to various proposals over the years to alter the compensation system. Most have focused on some form of tax equivalency—compensating the states and counties at roughly the same level as if the lands were privately owned and managed. Many acknowledge the validity of this approach for fairly and consistently compensating state and county governments. However, most also note the difficulty in developing a tax equivalency compensation system, because counties and states use a wide variety of mechanisms to tax individuals and corporations—property taxes, sales taxes, income taxes, excise taxes, severance taxes, and more. Thus, developing a single federal compensation system for the tax-exempt status of federal lands may be very difficult if not impossible.

In his 1984 budget request, President Reagan proposed replacing the receipt-sharing programs with a tax equivalency system, with a guaranteed minimum payment. The counties argued that the proposal was clearly intended to reduce payments, noting that the budget request projected savings of $40.5 million (12%) under the proposal. The change was not enacted. The FY1986 FS budget request included a proposal to change the payments to 25% of net receipts (after deducting administrative costs). Legislation to effect this change was not offered.

In 1993, President Clinton proposed a 10-year payment program to offset the decline in FS and O&C timber sales, and thus payments, resulting from efforts to protect northern spotted owls and other values in the Pacific Northwest. Congress enacted this program in §13982 of the 1993 Omnibus Budget Reconciliation Act (P.L. 103–66). These “spotted owl” payments began in 1994 at 85% of the FY1986-FY1990 average payments, declining by 3 percentage points annually, to 58% in 2003, but with payments after FY1999 at the higher of either this formula or the standard payment.

In his FY1999 budget request, President Clinton announced that he would propose legislation “to stabilize the payments” by extending the spotted owl payments formula to all national forests. The proposal would have directed annual payments from “any funds in the Treasury not otherwise appropriated,” at the higher of (1) the FY1997 payment, or (2) 76% of the FY1986-FY1990 average payment. This approach would have increased payments in areas with large payment declines while decreasing payments in other areas, as well as eliminating annual fluctuations in payments and de-linking the payments from receipts. The Administration’s proposed legislation was not introduced in Congress. The FY2000 and FY2001 FS budget requests contained similar programs, but no legislative proposals were offered.

The National Association of Counties (NACo) proposed an alternative in 1999. The NACo proposal would have provided the counties with the higher of (1) the standard payment, or (2) a

replacement payment determined by the three highest consecutive annual payments for each county between FY1986 and FY1995, indexed for inflation. NACo also proposed “a long-term solution ... to allow for the appropriate, sustainable, and environmentally sensitive removal of timber from the National Forests” by establishing local advisory councils. The NACo approach would have maintained or increased the payments and might have reduced the annual fluctuations, but would likely have retained the linkage between receipts and payments in at least some areas.

Legislative History of the Secure Rural Schools and Community Self-Determination Act of 2000, as Amended

Several bills were introduced in the 106th Congress to alter FS and O&C payments. After extensive debates, Congress enacted the Secure Rural Schools and Community Self-Determination Act of 2000 (SRS, P.L. 106-393). The act established an alternative payment system for FY2001-FY2006. At each county’s discretion, the states with FS land and counties with O&C land received either the regular receipt-sharing payments or 100% of the average of the three highest payments between FY1986 and FY1999. Counties receiving less than $100,000 under the alternative system could distribute the entire payment to roads and schools in the same manner as the 25% payments. However, counties receiving at least $100,000 under the alternative system were required to spend 15%-20% of the payment on (1) federal land projects proposed by local resource advisory committees and approved by the appropriate Secretary if the projects met specified criteria, including compliance with all applicable laws and regulations and with resource management and other plans (identified in Title II of the act) or (2) certain county programs (specified in Title III of the act). Funds needed to achieve the full payment were permanently appropriated, and came first from agency receipts (excluding deposits to special accounts and trust funds) and then from “any funds in the Treasury not otherwise appropriated.”

With the enactment of SRS, the total payment to counties rose from $194 million in FY2000 (in nominal dollars) to $363 million in FY2001 (Figure 2). For the initial six years SRS was authorized, the average payment was $370 million annually, more than $130 million above the average annual payment for the six years prior to the enactment of SRS (FY1995-FY2000).

Reauthorization Efforts in the 110th Congress

SRS expired at the end of FY2006, with final payments made at the end of December 2006. Legislation to extend the program was considered in the 110th Congress; various bills would have extended the program for one or seven years, and one specified funding it with a miniscule (0.00086%) rescission of “any [FY2007] non-defense discretionary account.” An amendment to the FY2007 continuing resolution (H.R. 2) to extend the program for one year was offered and then withdrawn.

The debate continued in the Emergency Supplemental Appropriations Act for FY2007 (H.R. 1591, the U.S. Troop Readiness, Veterans’ Care, Katrina Recovery, and Iraq Accountability Appropriations Act, 2007). The House included a one-year extension of the program. The Senate amended the bill (S.Amdt. 709) to extend the program for five years (FY2008-FY2012) and significantly change the formula for allocating funds to the counties; the change was to address
the concentration of payments in certain areas by spreading payments more broadly (as discussed below). The conference agreed to the House-passed version (a one-year extension), but the bill was vetoed by President George W. Bush.

A new version of Emergency Supplemental Appropriations for FY2007 (H.R. 2206) was introduced on May 8, 2007. This bill also included a one-year extension of SRS payments, and it was signed into law as P.L. 110-28 on May 25, 2007. Title V, Chapter 4, §5401, authorized payments of $100.0 million from receipts and of $425.0 million from appropriations, to “be made, to the maximum extent practicable, in the same amounts, for the same purposes, and in the same manner as were made to States and counties in 2006 under that Act.” Thus, preliminary FY2007 payments were made at the end of September 2007, with final payments made at the end of December 2007.

Another bill—the Public Land Communities Transition Assistance Act (H.R. 3058)—was introduced in July 2007 to extend, modify, and phase out the SRS payments; it was similar to the 2007 Senate Amendment to H.R. 1591. The House Natural Resources Committee held a subcommittee hearing on the bill on July 26, 2007, and a committee markup on September 26, 2007. The committee ordered the bill reported, amended, by voice vote. The bill was brought up on the House floor under suspension of the rules procedures, but did not garner the two-thirds vote needed to pass under this procedure, and it wasn’t brought up later under other procedures.

**Four-Year Extension Enacted in the 110th Congress**

Section 601(a) of H.R. 1424 extended the SRS payment program with several changes: “full funding” that declines over four years; the basis for calculating payments; transition payments for certain states; and the use of SRS funds for Title II and Title III activities. In addition, §601(b) modified the original FS 25% payment program (under which counties can get compensation in lieu of SRS payments and for payments after SRS expires). Finally, §601(c) provided five years of mandatory spending for the PILT program.

**Full Funding**

The act defined full funding for SRS in §3(11). For FY2008, full funding was $500 million; for FY2009-FY2011, full funding was 90% of the previous year’s funding. However, total payments exceeded the full funding amount in the first two years; payments under SRS totaled $562.8 million in FY2008 and $509.7 million in FY2009. This occurred because the calculated payments (discussed below) are based on full funding, as defined in the bill, but the act also authorized transition payments (discussed below) in lieu of the calculated payments in eight states. Since the transition payments exceeded the calculated payments for those states, the total payments were higher than the full funding amount.
Calculated Payments

SRS payments to each state (for FS lands) or county (for O&C lands) differed significantly from the payments made under the original SRS; Table A-1 shows the dollars and share of total SRS payments in each state in FY2006 and FY2009. Payments under §102 were based on historic revenue-sharing payments (like SRS), but modified based on each county’s share of federal land and relative income level. The payment calculations required a multiple-step process:

- **Step 1.** Determine the three highest revenue-sharing payments between FY1986 and FY1999 for each eligible county, and calculate the average of the three.11

- **Step 2.** Calculate the proportion of these payments in each county (divide each county’s three-highest average [Step 1] by the total of three-highest average in all eligible counties, with separate calculations for FS lands and O&C lands).

- **Step 3.** Calculate the proportion of FS and O&C lands in each eligible county (divide each county’s FS and O&C acreage by the total FS and O&C acreage in all eligible counties, with separate calculations for FS lands and O&C lands).

- **Step 4.** Average these two proportions (add the payment proportion [Step 2] and the acreage proportion [Step 3] and divide by 2, with separate calculations for FS lands and O&C lands). This is the base share for counties with FS lands and the 50% base share for counties with O&C lands.

- **Step 5.** Calculate each county’s income adjustment by dividing the per capita personal income in each county by the median per capita personal income in all eligible counties.

- **Step 6.** Adjust each county’s base share [Step 4] by its relative income (divide each county’s base share or 50% base share by its income adjustment [Step 5]).

- **Step 7.** Calculate each county’s adjusted share or 50% adjusted share as the county’s proportion of its base share adjusted by its relative income [Step 6] from the total adjusted shares in all eligible counties (divide each county’s result from Step 6 by the total for all eligible counties [FS and O&C combined]).

In essence, the amendment differed from the original SRS by basing half the payments on historic revenues and half on proportion of FS and O&C land, with an adjustment based on relative county income. This was done because of the concentration of payments under the original SRS to Oregon, Washington, and California (more than 75% of payments in FY2006; see Table A-1). Several counties opted out of the amended SRS system, while others opted in, because of the altered allocation. For example, in FY2006 100% of the payments to Pennsylvania were under SRS, but in FY2009 only 54% of the payments to Pennsylvania were under SRS. Conversely, in FY2006 none of the payments to New Hampshire and only 29% of the payments to Michigan were under SRS, but in FY2009, 44% of the payments to New Hampshire and 78% of the payments to Michigan were under SRS.

11 Eligible counties are those that choose to receive payments under this program; counties that choose to continue to receive payments under the original revenue-sharing programs are excluded from these calculations.
In addition, the act set a full payment amount allocated among all counties that chose to participate in the program (eligible counties). Thus, the fewer counties that participated (i.e., the more that opted for the original payment programs), the more each participating county received.

Transition Payments

In lieu of the calculated payments under §102, the counties in eight states—California, Louisiana, Oregon, Pennsylvania, South Carolina, South Dakota, Texas, and Washington—received transition payments for three fiscal years, FY2008-FY2010. These counties were included in the calculations, but received payments of a fixed percentage of the FY2006 payments under SRS, instead of their calculated payments. The schedule in the act specified FY2008 payments equaling 90% of FY2006 payments, FY2009 payments at 81% of FY2006 payments, and FY2010 payments at 73% of FY2006 payments. Because the transition payments were higher than the calculated payments (using the multi-step formula, above), total payments have been greater than the “full funding” defined in the act.

Title II and Title III Activities

As with the original SRS, the amended version allowed counties with less than $100,000 in annual payments to use 100% of the payments for roads and schools (or any governmental purpose for O&C counties). However, it modified the requirement that counties with “modest distributions” (annual payments of more than $100,000 but less than $350,000) use 15%-20% of the funds for Title II projects (reinvestment in federal lands). Instead, these counties could use the required 15%-20% either for Title II projects or for Title III projects (county projects). Counties with payments of more than $350,000 were limited to 7% of the payments for Title III programs. The amendment also modified the authorized uses of Title III funds, deleting some authorized uses (e.g., community work centers) while expanding authorized uses related to community wildfire protection.

Income Averaging

Section 601(b) of the act altered the FS 25% Payment to States program. It changed the payment from 25% of current-year gross receipts to 25% of average gross receipts over the past seven years—essentially a seven-year rolling average of receipts. This reduced the annual fluctuation in payments, providing more stability in the annual payments. Thus payments increase more slowly than in the past when and where national forest receipts are rising, but decline more slowly when and where receipts are falling. This change immediately affected counties with FS land that chose not to participate in the SRS payment program, and will affect all counties with FS land in FY2013 (unless SRS is reauthorized or some other alternative is enacted).

Payments in Lieu of Taxes (PILT)

Section 601(c) of the act provided mandatory spending for the PILT program for five years, FY2008-FY2012. This meant that eligible counties received the full calculated PILT payment for those five years—a significant increase in PILT payments, since appropriations averaged less than two-thirds of the calculated payments over the past decade. After FY2012, PILT would again require annual appropriations, unless Congress extends mandatory spending for the program.
Reauthorization Efforts in the 112th Congress

SRS expired at the end of FY2011, with final payments made at the end of December 2011. Legislation to extend the program for five years was considered in the 112th Congress. The County Payments Reauthorization Act of 2011 (S. 1692 and H.R. 3599) would have extended SRS through 2016 and included provisions to slow the decline of the full funding levels to 95% of the preceding fiscal year. Neither the Senate nor the House version was reported out of committee.

One-Year Extension Enacted in the 112th Congress

On April 24, 2012, the Senate passed S. 1813, the Moving Ahead for Progress in the 21st Century Act (MAP-21), with a one-year extension for SRS. The companion legislation in the House did not contain the extension, but the House agreed to the Senate amendments on June 29, 2012. On July 6, 2012, President Obama signed P.L. 112-141 into law.

Section 100101 of P.L. 112-141 extended the SRS program through FY2012 with funding at 95% of the FY2011 level, and included requirements for the counties to select their payment option in a timely manner. The program expired on September 30, 2012, meaning that payments will revert to the original 25% receipt-sharing formula for FY2013, absent further action by Congress.

Legislative Issues

Congress may consider extending SRS, with or without modifications, implementing other legislative proposals to address the county payments, or taking no action (thus continuing the revenue-based system that took effect upon the program’s expiration). Generally, six issues commonly have been raised about compensating counties for the tax-exempt status of federal lands: the lands covered; the basis for compensation; the source of funds; the authorized and required uses of the payments; interaction with other compensation programs; and the duration of the new system. In addition, any new mandatory spending in excess of the baseline that would result in an increase in the deficit may be subject to budget rules, such as congressional pay-as-you-go (PAYGO) rules, which generally require budgetary offsets.12

Offsets for New Mandatory Spending

One policy issue concerns legislation with mandatory spending that would increase federal expenditures, and whether such spending should be offset so as not to increase the deficit. Congress has enacted a set of budget rules requiring that most legislation that creates new or extends existing mandatory spending (in excess of the baseline) be balanced—offset—by increases in receipts or decreases in other mandatory spending. The budget rules may be waived or set aside in particular instances, but the increased deficit spending remains a consideration.

Legislation to reauthorize the Secure Rural Schools and Community Self-Determination Act of 2000 (with or without other modifications), or to enact a different alternative, would require an offset—increased revenues or decreased spending from other mandatory spending accounts—or a waiver to the budget rules. In 2000, Congress provided such a waiver by including a specific type of provision, called a reserve fund, in the budget resolution.

In 2006, to fund a six-year reauthorization of SRS, the Bush Administration proposed selling some federal lands. To fund the O&C payments, the BLM would have accelerated its land sales under §203 of the Federal Land Policy and Management Act of 1976 (FLPMA; 43 U.S.C. §1713). For the FS payments, estimated at $800 million, the FS would have sold approximately 300,000 acres of national forest land. This would have required legislation, as the FS currently has only very narrow authority to sell any lands. The Administration offered draft legislation to authorize these land sales, but no bill to authorize that level of national forest land sales was introduced in the 109th Congress. Instead, Congress again included a reserve fund for SRS payments in the budget resolution.

In 2007, the Bush Administration again proposed selling national forest lands to fund a phase-out of SRS payments, with half of the land sale revenues to be used for other programs (including land acquisition and conservation education). Again, no legislation to authorize national forest land sales was introduced.

Lands Covered

SRS includes payments only for national forests and for the O&C lands. Some observers have noted that these compensation programs provide substantial funding for the specified lands, while other federal lands that are exempt from state and local taxation receive little or nothing. The easiest comparison is with the national grasslands. Some have questioned the logic of compensating national forest counties with 25% of gross receipts and protecting these counties from declines in receipts under SRS, while compensating national grassland counties with 25% of net receipts and excluding them from SRS. Both forests and grasslands are part of the National Forest System, although the laws authorizing their establishment differ.

More significantly, many other tax-exempt federal lands provide little compensation to local governments. The BLM has numerous compensation programs, but generally the payments are quite small. (The O&C payments account for about 95% of BLM compensation payments, but O&C lands are only about 1% of BLM lands.) The National Park Service has two small compensation programs related to public schooling of park employees’ children at two parks. PILT provides some compensation for most federal lands, but many lands—inactive military bases, Indian trust lands, and certain wildlife refuge lands, for example—are excluded, and the national forests and O&C lands get PILT payments in addition to other compensation. In 1992, the Office of Technology Assessment recommended “fair and consistent compensation for the tax exempt status of national forest lands and activities.” This concept of fair and consistent compensation could be extended to all tax-exempt federal lands. Others argue that the limited costs imposed on local governments by federal land ownership may lead to overcompensating state and local governments.

Basis for Compensation

The legislative histories of the agriculture appropriations acts establishing the FS payments to states (the last of which, enacted on May 23, 1908, made the payments permanent) indicate that the intent was to substitute receipt-sharing for local property taxation, but no rationale was discussed for the level chosen (10% in 1906 and 1907; 25% since). Similarly, the rationale was not clearly explained or discussed for the Reagan tax-equivalency proposal, for the spotted owl payments (a declining percent of the historical average), or for the legislation debated and enacted by the 106th Congress (generally the average of the three highest payments during a specified historical period). The proposals’ intents were generally to reduce (Reagan Administration) or increase (more recently) the payments.

The geographic basis is also a potential problem for FS payments. FS 25% payments are made to the states, but are calculated for each county with land in each national forest.14 Depending on the formula used—the average of selected historical payments from each national forest or to each county or each state—the calculations could result in different levels of payments in states with multiple national forests.15 (This is not an issue for O&C lands, because the O&C payments are made directly to the counties.)

Source of Funds

As noted above, the FS 25% payments are permanently appropriated from agency receipts, and were established prior to federal income taxes and substantial federal oil and gas royalties. Most of the proposals for change also would establish mandatory payments; lacking a specified funding source, mandatory spending would come from the General Treasury. SRS directed payments first from receipts, then from the General Treasury. Figure 3 shows the breakdown of SRS funding between receipts and the General Treasury. Critics are concerned that retaining the linkage between agency receipts (e.g., from timber sales) and county payments (albeit less directly than for the 25% payments) still encourages counties to support timber sales over other FS uses.

---

14 There was no discussion in the legislative history of why the payments were made to the states, and not directly to the counties.

15 The complexity of this situation is shown using Arizona as an example in out-of-print CRS Report RL30480, Forest Service Revenue-Sharing Payments: Legislative Issues (available from the author).
Authorized and Required Uses of the Payments

The FS 25% payments can be spent only on roads and schools in the counties where the national forests are located. State law dictates which road and school programs are financed with the payments, and the state laws differ widely, generally ranging from 30% to 100% for school programs, with a few states providing substantial local discretion on the split. The O&C payments are available for any local governmental purpose.

SRS modified these provisions by requiring (for counties with at least $100,000 in annual payments) that 15%-20% of the payments be used for other specified purposes: certain local governmental costs (in Title III); federal land projects recommended by local advisory committees and approved by the Secretary (under Title II); or federal land projects as determined by the Secretary (under § 402). Use of the funds for federal land projects has been touted as “reinvesting” agency receipts in federal land management, but opponents argue that this “re-links” county benefits with agency receipt-generating activities and reduces funding for local schools and roads. The Forest Counties Payments Committee recommended granting local governments more flexibility in their use of the payments. The committee also recommended that the federal government prohibit the states from adjusting their education funding allocations because of the FS payments.16

---

16 Some states include FS payments allocated for education in their calculations allocating state education funds to the counties.
Duration of the Programs

The questions Congress may consider are (1) how often should Congress review the payment systems (these or all county compensation programs, or the lack thereof) to assess whether they still function as intended; and (2) what options are available (e.g., a sunset provision) to induce future Congresses to undertake such a review? The FS 25% payments and the O&C payments are permanently authorized. The FS 25% payments were established in 1908 (after having been enacted as a one-year program in 1906 and again in 1907). The O&C payments were established in 1937. The owl payments were a 10-year program, enacted in 1993. SRS was originally enacted as a six-year program that expired on September 30, 2006, but was extended an additional six years through September 30, 2012. The Forest Counties Payments Committee recommended a permanent change based on SRS, with some adjustments.
Appendix. SRS Payments in FY2006 and FY2009

As described in the text, under “Four-Year Extension Enacted in the 110th Congress,” the SRS payment formula was modified in the extension to include federal acreage and relative income in each county, as well as transition payments in some states. The result was a change in the payments and the allocation of total payments in the modified formula. These changes are shown in Table 2. Note, however, that the change in the payment formula led some counties that had chosen 25% payments for FY2006 to opt for SRS payments for FY2009, and vice versa. Some of the increase in SRS payments in FY2009 is due to more counties opting for SRS payments in some states, such as Michigan, New Hampshire, Ohio, Puerto Rico, and Wisconsin. In at least one state—Pennsylvania—a portion of the decline is due to some counties opting for 25% payments in FY2009.

**Sources:**
- **FS:** U.S. Dept. of Agriculture, Forest Service, “All Service Receipts (ASR), Final Payment Summary Report PNF (ASR-10-01),” unpublished reports.

**Note:** Counties could choose to receive the regular 25% FS payments or 50% O&C payments, rather than the SRS payments, and in many cases opted for the 25% in FY2006 or FY2009, and sometimes in both fiscal years. Thus, a change in the SRS payments in the table might not reflect the total change in FS payments to that state.
